It’s time to get smart about your unit dose equipment.

Pentapack...
a smart dose of engineering, collaboration and ideas.
Pentapack leads the pack in solutions for hospital pharmacies

Pentapack’s HP500 machines are built for daily use in hospital and healthcare system pharmacies. They require no special training to use and are built for dependability, flexibility and low maintenance.

The HP500 Series is smartly engineered to offer multiple capabilities that package, seal and label oral solid and liquid medications, vials and small syringes in individual blisters.

**Pentapack’s Advanced Technology**

**Thermo-forming** can process PVC, PVC/PVdC and Polyester PVdC

**Control panels** can be programmed to adjust the blister strip length, production speed and manual/production modes

**Barcoding software** prints labels for unit dose blisters to ensure clear identification and safe distribution of medications in the hospital setting

**Liquid dosing system** with the HP500 can fill unit dose blisters up to 15ml; the HP550 fills them up to 30ml

**Pentapack’s HP500 machines** are built for daily use in hospital and healthcare system pharmacies. They require no special training to use and are built for dependability, flexibility and low maintenance.

**The smart solution for unit dose packaging**
